

# Y2 Science: Animals, including Humans

Animals, including humans, **reproduce** and have **offspring** which **grow** into adults.

Some adult animals, such as mammals, give birth to live young which look like them.

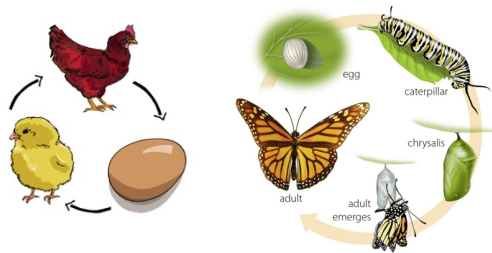

baby      toddler      child      teenager      adult      elderly

All animals, including humans, have basic needs of **eating**, **drinking**, and **breathing** to be able to survive.

Some animals lay eggs that hatch into their young, or they go through other stages and then **grow** to adults.

The young of some animals do not look like their parents.

**Alexander Fleming**  
1881-1955  
- discovered the antibiotic, penicillin.

To be healthy, humans need the right amount and types of **food** and **exercise**.

**What I remember from Y1:**  
- Humans have 5 senses  
- Animals eat certain things.

Good **hygiene** is also important in preventing **infections** and illnesses.
