

Y2 Science: Living Things & Their Habitats

A **habitat** is a place where animals and plants live that provides for their basic needs – **shelter, food, and water.**

Animals have **suitable** features that help them move and find food, and plants have suitable features that help them to grow well.

living

dead

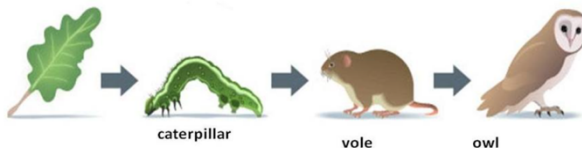

never been alive

Within a habitat, there are different **micro-habitats.**

Micro-habitats have different living conditions, affecting what can live there.

A **food chain** shows the order of what living things eat and how they depend on each other.

What I remember from Y1:

- Names of plants in our local area
- Different animal body parts
- What different animals eat.

Jane Goodall
- expert on chimpanzees and conservation.
