

# Y4 Science: Living Things and Their Habitats

## What I remember from Y2:

- A habitat provides for the basic needs of a living thing: food, water and shelter
- In a habitat there are smaller micro-habitats.

Living things can be grouped (**classified**) in different ways according to their features.

**Classification keys** can be used to identify and name living things.

Living things live in a **habitat** which provides an **environment** to which they are suited.

These **environments** may change naturally e.g. through flooding, fire, earthquakes etc.

Humans also cause the **environment** to change. This can be in a good way (**positive human impact**), such as setting up nature reserves or in a bad way (**negative human impact**), such as **pollution** and **climate change**.

These **environments** also change with the seasons; different living things can be found in a **habitat** at different times of the year.

**Greta Thunberg**  
- Swedish environmental activist

**deforestation**
